

Lifesize cut out safety figure

- To get the best result for your cut out safety figure.
- Have your model face straight forward with their heels in line (about a shoulders width apart).
- If you have a sign can you ask them to hold it centrally at chest height. Both feet need to the same distance from the camera.
- The camera shot should be taken from around half the height of the model and should include the model's head and feet.
- If you want us to add the sign layout then ask your model to hold a rectangular object around A2 size (594mm x 420mm). The item should be held straight and their hands should be in the bottom corners.
- Please email the original photo to us, ensuring it is not resized when is attached to the email.
The higher the file size the better the print quality.
