INTRODUCTION TO TSC SIGNS

For over 25 years TSC Signs Ltd have been manufacturing signs from our location in Burton-upon-Trent in the Midlands and sending them to customers across the UK and beyond.

We specialise in meeting the needs of the construction industry but also have customers in many sectors such as education and Facilities Management.

We are proud to manufacture signs for many prestigious projects such as Crossrail, HS2 and the Thames Tideway Tunnel. We work with our customers to design and manufacture their own corporate signage ranges.

We have ecommerce and electronic invoicing capabilities so can easily accommodate each customers procurement and invoicing requirements. We understand the needs of our customers and manufacture products tailored to this sector.

We use a wide range of sign manufacturing techniques and our efficient processes leads to quick turn-around of custom and bespoke signs. Our sales and production teams work closely together for a highly effective customer service experience.

Our sales team take the hassle out of ordering your sign requirements. We offer to talk you through the best design, sizes and materials to meet your specific needs.

We can also send drawings of your signs (at no extra cost) so you can be sure you are 100% happy before manufacture. Our commitment to quality is backed by our certification to ISO 9001:2015 and Sector 9A of the National Highways Sector Scheme.

We also design and manufacture permanent traffic signs in line with The Traffic Regulations and General Directions 2002 and are CE Certified to BS EN 12899:2007.

This catalogue is a guide to our standard signage range and custom template codes. These custom codes allow you to pick the size, material and design of your sign and then add your own wording at only a fraction more than the cost of a standard sign. We also offer many bespoke sign solutions. If you cannot see the sign you require please get in touch with one of our team.

Engraving

Engraving is one of the more traditional methods of sign production used at TSC Signs. We can offer engraved signs in a range of substrates such as plastic laminate, stainless steel, brass and aluminium. Engraving laminates come in a variety of colours and are commonly used for applications such as equipment labels and valve tags. This material is resistant to water, oxidisation and solvents which makes it ideal for industry.

Engraving laminates are also available with metallic finishes. These are ideal for finished building door signs. Alternative engraving laminates are used for outdoor applications that require a high level of UV resistance and scratch resistance. We have produced products such as presentation plaques and water valve information signs on this material. Brass, stainless steel and aluminium engraved signs can be supplied with company colours and logos alongside any text required.

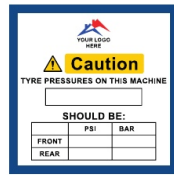

Please contact one of our team to discuss your requirements.

Vehicle grade magnetic

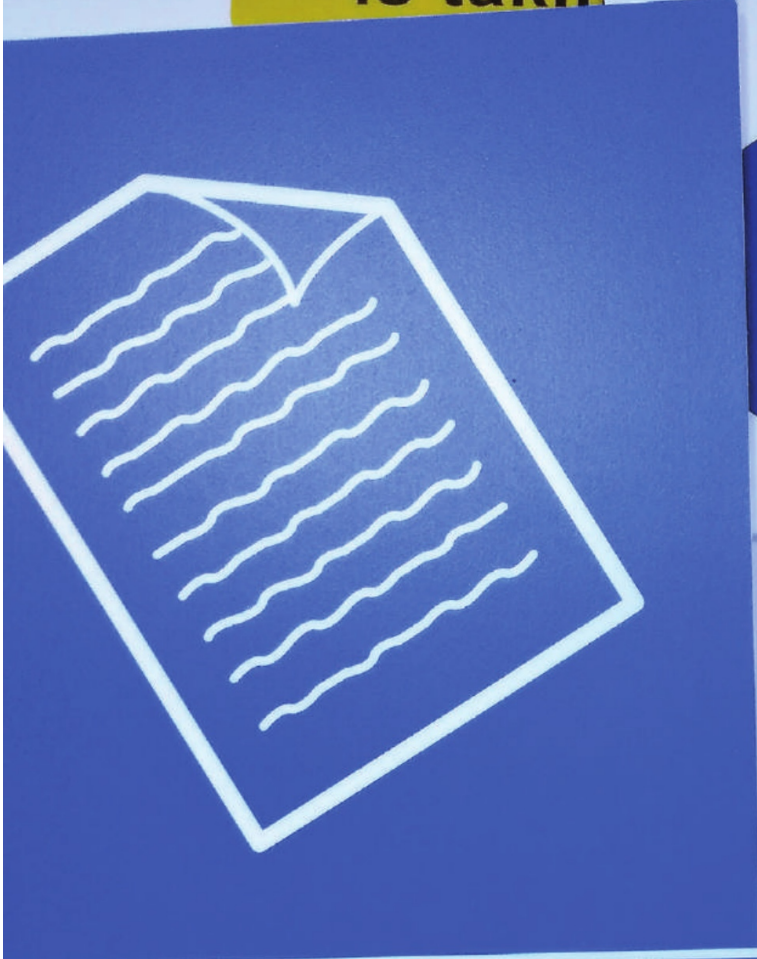

Our vehicle grade magnetic is ideal to brand your on-hire plant and vehicles. Plant is often quite visible to the community surrounding projects. This means it is a great space to advertise and strengthen the awareness of your brand in the area in which you are working.

We have a range of custom template codes on page 50 which you can use to add your own wording or your logo. We can also make magnetic signs to your bespoke size, up to 2440mm x 1220mm.

Let us know the size and the wording / logo you require and we can do the rest.

EN 12899-1:2007
Retroreflective sign plates for fixed vertical road traffic signs.

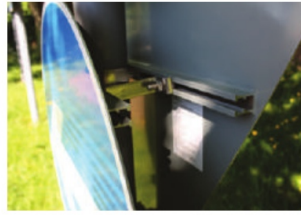

Drawing ref: Dia 616
Material: Aluminium
Size: 600mm

Resistance to horizontal loads -
Fixings - No performance determined
Wind action - WL
Temporary deflection bending - TD85
Dynamic snow load - DSL0
Point loads - PL2
Permanent deflection - Pass - No performance determined
Partial action factor - PAF1
Visibility characteristics
Daylight chromaticity & luminance factor - CR1 / CR2
Coefficient of retroreflection - RA1 / RA2
Durability
Impact resistance of the sign face material - pass
Resistance to weathering (three year accelerated natural weathering test) - Pass
Resistance to corrosion - SP1
